

Don't cover up that spill with clay, absorb it with Bio-Matrix!

The environment friendly 100% organic choice for the most rapid absorption of fuel and oil spills at accident scenes currently available on the market!

Bio-Matrix is 100% organic, lab-tested, field proven, light weight...economical, efficient, non-abrasive, non-toxic, non-leaching. In its dry form it absorbs approximately 10 times its own weight in hydrocarbons...and then rapidly turns these pollutants into natural by-products.

Sphagnum peat has "barrel" cells that encapsulate all derivatives of crude oil and will not leach. Natural acids in the cell then slowly "digest" the pollutant molecules, leaving behind environmentally friendly carbon dioxide, water, and fatty acids.

Bio-Matrix absorbs on contact: oils, solvents, heavy metals, pesticides, herbicides, organic chemicals, PCB's, blood, dyes, and vegetable oils. It will suppress vapors. Will not absorb water, ideal for water clean-ups and waste wash filtration.

Bio-Matrix is available in 1.2 and 4.0 cu.ft. double compressed bags as well as 5 lb loose filled resealable bags for quick use on accident scenes!

Bio-Matrix is also available in premade 15 gallon spill kits in a bag that is small enough to fit in a trunk or behind a seat of a fire truck or police car!
