

**EDMONDSON & OAKES
RACING TEAM
BROKEN ARROW, OKLAHOMA**

Dear Sir,

After using Power Up in my equipment in the dirt business and was well pleased with it. My sons and I have decided to try Power Up in our sprint race car. The first thing we had to do was idle the injectors down, about 500 RPM. We had just put the engine on the dino before we started using Power Up in it, the H/P was 760. We run the car 15 races and pulled the engine down for inspection, we found the engine inside was in great shape, we could have run many more times. After we put the engine back together and rerun it on the same dino we got 793 H/P out of it. We feel that Power Up is giving much more horse power and engine life, which i turn makes us win more races.

We finished second place in our division, Tony also made rookie of the year in the Sprint Car Division for this 91 season, and we feel that Power Up was a great factor in our success.
