To Whom It May Concern:

In the latter part of 2005, we began a maintenance program dedicated to lengthening our oil drain cycles. We wanted to increase our drain cycles from 250 hours to 400 hours, while maintaining the integrity of the oil. On our own, we increased the hours from 250 to 300 by changing the OEM filters more frequently.

In December 2005, we were introduced to the Kleenoil Bypass Oil Filtration System and decided to pilot test the system on a variety of different types of equipment. We filtered engine oil and hydraulic fluid on Gomaco pavers, Mack Dump Trucks, CAT D9 dozers, scrapers and graders.

The results on all of the equipment have been impressive. Proven through independent oil analysis, we improved our oil drain intervals to over 800 hours in our engines reducing the amount of downtime. We continue to keep the hydraulic fluid cleaner than new oil saving unnecessary wear on the hydraulic pumps and valves. In fact, using the Kleenoil System, we no longer change our hydraulic fluids on a schedule. We now change it by fluid analysis only.

The Kleenoil filter keeps the oil cleaner than new oil, saving us a significant amount of money in upfront maintenance costs. We believe the biggest savings for our company will happen in the future with decreased engine wear and less downtime, since our equipment will be running on cleaner than new oil all the time. We highly recommend this product and will be installing it on more of our equipment in the future.

Sincerely,

Mike Manley
Equipment Superintendent
