

TO WHOM IT MAY CONCERN:

POWER UP has been a big boost to the Stavola Brothers Race Team on the NASCAR Winston Cu Circuit. Not only by its financial support as an Associate Sponsor for the 1990 season, but also by using the POWER UP product in the race car.

In testing POWER UP, we ran an engine on the dyno with our regular racing oil. Then we added the recommended proportion of POWER UP to the oil, we showed an increase of four horsepower and a better gas mileage reading.

After running well in the Pepsi 400 at Daytona on July 7th where we finished sixth, we inspected the motor and noticed very little wear after 500 miles. (100 miles of practice and 400 miles of racing.)

The engine people freshened up the motor using the same pistons and we ran well at Talladega on July 29th where we finished tenth. After race inspection of the motor showed very little wear and this was after 1185 miles on the engine.

Our race car was able to lead both of these races several different times and if circumstances would have been right, we could have won both events. Competition is so keen today that every advantage must be taken and we believe we have an advantage in POWER UP.

Seeing these results, one of our engine technicians tried POWER UP in his pontoon boat outboard motor and saw an increase of 50 RPM immediately.

We have and will be using POWER UP in our applications. Please feel free to call us if you have any questions about POWER UP.

E.J. Brasfield
